PRICE LIST

GLADIOLUS

Plant when the trees native to your vicinity begin to unfold their leaves.

Plant in an exposed place where the sun has access. Well drained, light soil is best. Plant in rows 4 to 6 inches deep and keep ground loose and free from weeds. Dig bulbs when foliage is turning brown. Cut tops off close to bulb and dry bulbs for a few days in open place, be sure to keep from frost and severe freezing. Store bulbs in cold cellar or similar dry place where the temperature averages as near as 40 degrees F. as possible.

In 1939 and 1940 we have been using ROTOTOX for spraying. It also can be used as a disinfectant for Bulbs before planting and is said to be used on European Corn borer, Dahlias, Delphinium, Rose Pests, etc.

4 oz. makes spraying solution enough to last a long time for the average gardener.

HINMAN'S GREENHOUSE

Guildersleeve Avenue

Collinsville, Conn.

We want your year around greenhouse and flower business, solely on the merits of our ability to serve you.

We deliver in Collinsville, Avon, New Hartford, daily and usually take in towns as far away as Hartford three or four times a week. In addition to this we are associated with TELEGRAPH FLORISTS the country over; AIR MAIL SERVICE SAVES YOU MONEY, when it can be used.

FRESH FLOWERS AT ALL TIMES
POTTED PLANTS - CACTI - SUCULENTS

Bridal Flowers and Decorations designed especially as a compliment to the wedding you plan.

TABLE ARRANGEMENTS and baskets for formal "at homes" or studied settings.

DIGNIFIED floral pieces for funerals, such as sprays, designs, plaques and blankets.

Prices are no more than you expect to pay for good workmanship. Out of town customers may call Collinsville 160 any time night or day and reverse toll charge for our services.

We want YOU for a customer.

Accommodation accounts to responsible people.

We can "Say It With Flowers".

A letter from

C. G. YOUNG, Secretary
National Gladiolus Society

concerning the use of

Lysol
Disinfectant
REG. U.S. PAT. OFF.

as a dip for

GLADIOLUS BULBS

.. to eliminate thrip

.. stimulate root growth

HOWARD A. HINMAN
GLADIOLUS
COLLINSVILLE, CONN.

For over 50 years Lysol has been used as a personal antiseptic and household disinfectant. Lehn & Fink laboratories, by extensive and continuous research, certify the purity of Lysol and seek new uses for the product in the above mentioned fields.

The use of Lysol for the elimination of thrips on gladiolus bulbs is foreign to our own field of research and therefore we are unable to furnish verified results from our own laboratories. However, in response to many requests for information on this use of Lysol we print the following letter received from C. G. Young, Secretary, National Gladiolus Society.

"LEHN & FINK PRODUCTS CORPORATION,
Bloomfield, New Jersey.

Gentlemen:

"Late in 1938 I received a bulletin from you dealing with the use of Lysol as a dip for the elimination of thrips from gladiolus bulbs at planting time. I used Lysol for my Spring 1939 planting. The amount of bulbs treated with Lysol solution was sufficient to plant six acres.

"I found that Lysol positively eliminated all thrips on the bulbs treated.

"Also I discovered that this treatment was of great benefit in stimulating root growth in dormant bulbs. To my amazement, the dormant bulbs of such notoriously hard starters as Betty Nuthall, etc., showed pronounced root growth in 3 days following dipping.

"Treatment which I recommend is as follows:

"Mix 4 teaspoonfuls of Lysol to 1 gallon of water. Soak bulbs in this solution for 6 hours.

"For breaking down shells on bulblets, soak in above solution for 16 hours or more according to toughness.

"Bulbs may be dipped and left for as long as three weeks before planting. Thus an efficient method of planting may be adopted by dipping all bulbs at one time.

"Dipping solution left for more than one week should be replaced.

"The total cost of Lysol which I used in dipping bulbs for a six acre planting amounted to only \$3.20,—an insignificant sum for the value received.

**LYSOL SOLUTION
POSITIVELY ELIMINATES
THRIPS**

**ALSO STIMULATES ROOT
GROWTH**

**DIRECTIONS FOR
TREATING BULBS
WITH LYSOL SOLUTION**

ECONOMY OF LYSOL

"There are many advantages in using Lysol solution for the elimination of thrips instead of the bichloride of mercury commonly recommended:

**ADVANTAGES OF
LYSOL OVER
BICHLORIDE OF
MERCURY**

"Lysol solution may be used for several dips without adding additional amounts of Lysol. This is not true of bichloride of mercury.

"Lysol solution may be placed in any type of container. Bichloride of mercury cannot be placed in a metal container.

"Lysol solution does not retard blooming. Bichloride of mercury may delay blooming for as much as two weeks.

"Lysol is not damaging to bulbs. Bichloride of mercury is damaging to split jumbo bulbs, etc.

"Furthermore Lysol solution is extremely easy to prepare and also will not remove pencil marks on labels of soaking bulbs.

"I am sure that Lysol will definitely solve gladiolus growers' problems and will have the added effect of encouraging many to again enter this field of endeavor.

"As Secretary of the National Gladiolus Society, I feel duty bound to strongly urge all growers, both professional and amateur, to use Lysol. My opinions are the result of my own personal experiments and are recommended in the hope that growers will cooperate by using this successful method of thrip elimination.

Signed: C. G. YOUNG, Secretary
National Gladiolus Society."
